**Autonomous State** Dimitry Anastakis 2013

Autonomous State provides the first detailed examination of the Canadian auto industry, the country's most important economic sector, in the post-war period. In this engrossing book, Dimitry Anastakis chronicles the industry's evolution from the 1973 OPEC

embargo to the 1989 Canada-US Free Trade Agreement and looks at its effects on public policy, diplomacy, business enterprise, workers, consumers, and firms. Using an immense array of archival sources, and interviews with some of the key actors in the events, Anastakis examines a fascinating array of topics in recent auto industry and Canadian business and economic history: the impact of new safety, emissions, and fuel economy regulations on the Canadian sector and consumers, the first Chrysler bailout of 1980, the curious life and death of the 1965 Canada-US auto pact, the 'invasion' of Japanese imports and transplant operations, and the end of aggressive auto policy-making with the coming of free trade. More than just an

examination of the auto industry, the book provides a rethinking of Canada's tumultuous post-OPEC political and economic evolution, helping to explain the current tribulations of the global auto sector and Canada's place within it.

**Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles**

National Research Council 2015-09-28 The light-duty vehicle fleet is expected to undergo substantial technological changes over the next several decades. New powertrain designs, alternative fuels, advanced materials and significant changes to the vehicle body are being driven by increasingly stringent fuel economy and greenhouse gas emission standards. By the end of the next decade, cars and light-duty trucks

will be more fuel efficient, weigh less, emit less air pollutants, have more safety features, and will be more expensive to purchase relative to current vehicles. Though the gasoline-powered spark ignition engine will continue to be the dominant powertrain configuration even through 2030, such vehicles will be equipped with advanced technologies, materials, electronics and controls, and aerodynamics. And by 2030, the deployment of alternative methods to propel and fuel vehicles and alternative modes of transportation, including autonomous vehicles, will be well underway. What are these new technologies - how will they work, and will some technologies be more effective than others? Written to inform The United States

Department of Transportation's National Highway Traffic Safety Administration (NHTSA) and Environmental Protection Agency (EPA) Corporate Average Fuel Economy (CAFE) and greenhouse gas (GHG) emission standards, this new report from the National Research Council is a technical evaluation of costs, benefits, and implementation issues of fuel reduction technologies for next-generation light-duty vehicles. Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles estimates the cost, potential efficiency improvements, and barriers to commercial deployment of technologies that might be employed from 2020 to 2030. This report describes these promising technologies

and makes recommendations for their inclusion on the list of technologies applicable for the 2017-2025 CAFE standards.

diesel DI combustion  
engines, which despite  
their commercial success  
are facing ever more  
stringent emission  
legislation worldwide.  
Direct injection diesel  
engines are generally  
more efficient and  
cleaner than indirect  
injection engines and as  
fuel prices continue to  
rise DI engines are  
expected to gain in  
popularity for  
automotive applications.  
Two exclusive sections  
examine light-duty and  
heavy-duty diesel  
engines. Fuel injection  
systems and after

*The Internationalization of the German Political Economy* William D. Graf

2016-07-27 The internationalization of the German political economy in the postwar era has produced a special socio-economic and political formation which this anthology views as a 'hegemonic project'. Based upon a virtually total West German integration into the 'West', this project has evolved within a new international division of labour and a global political system in which the German state, with its extreme level of export dependency and need for stability, has become a guardian and champion of the global status quo.
